

In Medieval times, a castle's entrance was often guarded by a reinforced front gate that could be lowered to bridge a moat. In today's times our need for both bridge and barrier hasn't changed much. Today, our homes' entry doors essentially serve the same purposes, providing both security and a welcoming connection to friends and family.

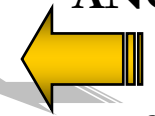

WHAT IS THE DEADBOLT SECURITY ANCHOR?

 The Deadbolt Security Anchor is the ultimate in secure strike plates available today.

WHY IS IT THE ULTIMATE SECURITY STRIKE PLATE?

 It's like no other security strike plate available on the market. Its patented design incorporates the use of double stud structure to reinforce the strike, preventing door frame from  tearing out.

WHY WOULD I WANT THE DEADBOLT SECURITY ANCHOR?

 In addition to personal safety and property protection, it may offer an opportunity for insurance premium savings. But best of all, it provides peace of mind.

How's your front door? Because an entry door makes a first impression, it should reflect your family's personal style and add to your home's value. And, of course, it should secure your home against intruders.

The Deadbolt Security Anchor Will Beat the Odds of Forced Entry and Keep You and Your Loved Ones Safe...

Nobreach has created a revolutionary design for a security strike plate that uses the actual structure of the doorway rather than trying to reinforce the 3/4 inch door frame as other devices do. Using 16 gauge cold rolled steel this industrial strength strike plate uses both 2x4s to anchor the faceplate onto the door frame. Break-ins would require either both 2x4s to break or tear the plate's 9000 psi rating. With its unique adjustable replacement cleat design the Deadbolt Security Anchor is quick and easy to install and does not require adjustments of the door or door frame. It is visible from the exterior acting as a deterrent. Even with a home security system the entry doors are still vulnerable to break-ins given the entry delay time. Stop break-ins with the Deadbolt Security Anchor. Remember, a deadbolt is only as good as its strike plate, so get the best!!!

EVERY YEAR, there are over 4.1 million burglary offenses in the U.S. known to police. According to that compilation, 72 percent of all burglaries are residential. Victims of burglary offenses suffered an estimated \$4.6 billion in lost property in 2009 with an average property loss of \$2,096. Most occur during the day between 6 a.m. and 6 p.m. Of the 4.1 million burglaries, 74% are forced entry through a doorway and 66% of them are through the front door.

Do you REALLY feel safe at or away from home? AND.....

Did you know?

- The majority of burglars are not deterred by alarm systems.
- The response time is often slow on alarm systems, giving a burglar 3 to 4 minutes to take valuables and run before authorities are notified.
- The door has already been damaged before the alarm activates.
- Any insurance claim is a claim against you.
